Experience

Software/UI Intern

Jul 2025 – Oct 2025

Ant AI

- Contributed to an AI-driven meeting assistant that converts transcripts into structured outputs (SRS, Figma specs, sprint tasks), improving team productivity.
- Conducted user interviews and surveys to identify navigation bottlenecks, then implemented interface improvements in **HTML** and **CSS**, resulting in faster navigation and reduced onboarding time for pilot users.

Software Consulting Intern - JFC

Jun 2025 – Jul 2025

Digital Village

- Built a production-ready full-stack site that automates form filling using **AI**, leveraging **TypeScript**, **Tailwind**, and **RESTful** architecture which reduces average time spent by ~60%.
- Migrated prototype to a scalable version using **AWS (EC2, S3)** with **Docker-based containerization**.

Casual Academic – Data Structures & Algorithms

Feb 2025 – Jun 2025

University of Sydney

- Tutored 40+ students in **Data Structures and Algorithms in Python**, providing guidance during labs and assessments to help them gain an in-depth understanding of recursion, trees, graphs, search algorithms & time complexity.

Projects

OnTheCharts: a Spotify Analytics tool

Aug 2025 – Nov 2025

ELEC3609

University project

- Designed and deployed a real-time analytics platform integrating the Spotify Web API (Python, Vite, AWS), supporting **concurrent user sessions** with **asynchronous request handling** and **live data refresh**.
- Engineered **session-level caching** to reduce response latency and mitigate external API rate limits, and **hardened backend security** via input validation, CSRF protection, and XSS mitigation.

CarbonWise: Sustainable Marketplace

Aug 2025 – Nov 2025

ELEC5619

University project

- Designed and implemented a full-stack marketplace with authenticated users, product listings, real-time messaging, and seller ratings, applying **UX** and **security** principles using **Spring Boot**, **React**, **Java**, **JavaScript**, **HTML & CSS**, and **MySQL**.

Support Generators for 3D Printers

Aug 2024 – Nov 2024

ASIGA

Capstone Project

- Coded a tool to detect overhangs in mesh models for 3D printing using **Python**, **vedo**, and **pyVista** for company ASIGA.
- Generated adaptive support structures using visualization libraries, significantly reducing material usage.

Leadership

HR Director, Network of Women (NOW): Led HR operations for a 1500+ member organisation, managing recruitment cycles, onboarding systems and large-scale networking events.

Events/Workshops Director, Google Developers Group Sydney: Organised and spoke at multiple Google-backed tech events (80+ attendees each), leading speaker outreach and showcasing emerging technologies.

Skills

Languages: Python (Advanced), Java, TypeScript, JavaScript, SQL, C, C++, R

Frameworks: React, Next.js, Spring Boot, Flask, Django

Cloud & DevOps: AWS, Docker, Jenkins

Databases: PostgreSQL, MySQL, Firebase

Tools: Git, Linux, Gradle, Jira, Confluence, Bitbucket, Vercel, Figma

Education

University of Sydney

Aug 2022 – Present

Bachelor of Engineering (Software Engineering) (Honours)

- 78 WAM
- Received the competitive **Sydney Scholars scholarship** with \$160,000 stipend and 20% tuition fee waiver for academic excellence.
